

# EERAV SAMEER

Senior Software Engineer | FinTech & Payments | Java Microservices | Distributed Systems

+91 70912 04933 · eeravsameer16@gmail.com · [linkedin](#) · [github](#) · Bangalore, India

## PROFILE SYNOPSIS

Backend engineer with 3 years of experience building and owning high-throughput payment platforms at scale — 10M+ users, <200ms p95 latency, 99.95% uptime. Promoted to Senior Software Engineer in 18 months. Deep expertise in Java/Spring Boot microservices, event-driven architecture (Kafka), distributed caching (Redis), and OAuth2/JWT security. Owns HLD/LLD end-to-end, lead incident response, and mentor engineers in a high-velocity fintech environment.

## CORE COMPETENCIES

- Backend Engineering & Circuit breakers
- Distributed Systems & High-Availability Design
- Redis Caching, Rate Limiting & Pub/Sub
- HLD / LLD & System Design
- CI/CD, Docker, Kubernetes & Jenkins
- Database Optimization — PostgreSQL, Oracle SQL
- FinTech, Payments & Digital Wallets
- Event-Driven Architecture (Kafka, RabbitMQ)
- REST API Design, OAuth2/JWT & API Security
- Production Ownership & Incident Management
- Observability — ELK Stack, Grafana, Prometheus
- API Gateway & Rate Limiting

## CAREER TIMELINE

### Comviva Technologies · Senior Software Engineer · Jan 2025 – Present

- Architected PG orchestration microservice for Card, UPI Intent, Net Banking & Mandate flows using Strategy, Registry, Facade & Template Method patterns — cut new gateway integration time by 85% (3 weeks → 3 days).
- Owned end-to-end HLD/LLD for the orchestration platform; documentation adopted as canonical design reference across 2 engineering teams.
- Introduced Redis sliding-window rate limiting on merchant-facing APIs, sustaining 50K+ req/min under peak load without SLA degradation.
- Optimized Oracle/PostgreSQL queries (index tuning, execution plan analysis) and layered Redis caching — reduced API latency by 40%, maintained 99.95% uptime.
- Delivered OAuth2/JWT-secured multi-partner APIs with token scoping & claim validation — cut partner onboarding time by 60%, eliminated 3 auth vulnerability classes.
- Mentored 3 junior engineers via structured code reviews and design sessions — improved team delivery velocity by ~25%.

### Comviva Technologies · Software Engineer · Aug 2023 – Dec 2024

- Built and owned core payment APIs (P2P, B2B, wallet-bank, bill payments) for Mobiquity Pay — 10M+ users, <200ms p95 latency, 99.9% availability.
- Engineered configurable biller onboarding framework reducing integration turnaround by 50%; enabled 20+ financial institutions to go live in under 2 weeks.
- Implemented Redis caching on hot read paths (biller catalog, fee configs) — reduced DB load by 40%, improved throughput 2x during peak traffic bursts.
- Built PIN-based transaction auth with replay-attack prevention; owned CI/CD pipeline improvements enabling zero-downtime deployments, cutting release cycles by 30%.
- Led RCA for 2 high-severity production incidents; implemented systemic fixes reducing MTTR by 45%.

## KEY PROJECTS — PLATFORM OWNERSHIP

### Mobiquity One — PG Orchestration Platform · Java, Spring Boot, Kafka, Redis, OAuth2, PostgreSQL · 2025–Present

- Pluggable microservice architecture with Strategy + Registry pattern — new PG integrations with zero changes to core service. Idempotency layer via distributed Redis locks preventing duplicate charges across retries at scale.
- Kafka-based async payment status propagation reducing downstream polling by ~60%. PCI-DSS compliant audit logging across Card, UPI & Net Banking flows.

### Mobiquity Pay — Digital Payments Platform · Java, Spring Boot, Oracle, PostgreSQL, Redis, Kafka · 2023–2025

- High-throughput P2P, B2B, wallet-bank & bill payment APIs at 10M+ user scale. Circuit breakers + fallback strategies for upstream partner failures. Async Kafka notification pipeline for real-time status to mobile/web clients.

## TECHNICAL SKILLS

**Backend & Architecture:** Java (8/11/17/21), Spring Boot 3.x (Spring MVC, Spring Security, Spring Data JPA), REST APIs, gRPC, Microservices, CQRS

**Distributed Systems:** Apache Kafka, RabbitMQ, Redis (caching, pub/sub, rate limiting), Event-Driven Architecture

**Databases:** PostgreSQL, Oracle SQL — query optimization, indexing, execution plan tuning, connection pooling

**Cloud & DevOps:** Docker, Kubernetes, Jenkins CI/CD, AWS (EC2, S3, SQS)

**Observability:** Grafana, ELK Stack (Elasticsearch, Logstash, Kibana), Prometheus, distributed tracing

**API & Security:** OAuth2, JWT, WSO2, KrakenD, NGINX, API rate limiting, Idempotency, SSL/TLS

**Tools:** JUnit, Mockito, Postman, JMeter, Git, GitLab, Confluence, JIRA, Swagger/OpenAPI

**AI & Productivity:** GitHub Copilot, Claude, ChatGPT, AI-assisted development (coding, testing, debugging)

## EDUCATION

M S Ramaiah Institute of Technology · B.E. Computer Science · CGPA: **8.72 / 10** · 2019 – 2023
